VISION SOLID

VISION BOLD

TOUCH

Speed Gates

An elegant & compact designed, swing speed gate with 24V BLDC motor. Opening and closing time between 0,7 - 1.5 sec.

ACCESS CONTROL INTEGRATION

Can be controlled by any kind of access control system through dry contact or COM ports.

Dept adjustable card reader & scanner installation area allows easy fitting.

Optional cuts on a glass top are available for surface mount readers, reader holders, or stands as well as standard or custom designed posts for access controller integration.

RFID Icon is positioned in the middle of the reader installation area to indicate the card reader position clearly.

An additional indicator on the top illuminates in red when the gate is locked and changes to green for confirmed passages or during the free passage.

LTOP Speed Gates Turnstiles are designed to be used in places where luxury and prestige come to the fore, such as banks and holdings, and for fast and busy visitor personnel entrances. Architects and decorators are given the chance to make very different super models in LTOP Speed Gates Turnstiles. In addition to wood, marble, granite, leather, and various walnut, oak, and olive veneers are used to create very luxurious solutions and special decorations.

LTOP turnstiles form a corridor. In the middle of this corridor, there is a curtain/wing that prevents the passage of glass or plexiglass. This curtain/wing opens when the visitor reads their card. While the visitor passes by, the sensor sensors in the corridor allow the card reader to pass. However, if there is a leak during the sudden shutdown, if it will pose a danger to the person, the wing will not close, but the alarm will sound and warn security.

LS140 A combination of elegant design and advanced security. With a 24V BLDC motor and 14 optical safety sensors, opening and closing times are between 0.7 and 1.3 seconds. The LS 140 is customized to your corporate colors or interior
Speed Gates design, making it an integral part of the lobby area.
